

BUCK d.o.o. is involved in development, production and trade of lighting equipment and spare parts. In its business processes BUCK pays special attention to energy management.

WITH CREATIVE SOLUTIONS IN LIGHTING AND INNOVATIVE PRODUCTS OF HIGH END QUALITY WE ARE STRIVING TO PROMOTE ENERGY EFFICIENCY AND ENERGY MANAGEMENT.

Our vision is to contribute to the quality of light and its positive impact on energy efficiency and energy savings by implementing an energy management system that meets the requirements of ISO 50001.

We achieve this by

- Identifying all aspects that may affect energy efficiency;
- Taking on management leadership and involving all employees to efficiently use their creative skills;
- Planning, maintenance and improvement of the implemented system;
- Energy management in accordance with the ISO 50001 standard, taking into account the conformity with legal and other requirements;
- Defining and implementing policy and implementation of non-statutory directives but having a significant impact on the energy management system;
- Preventive measures to avoid unnecessary energy consumption and to continuously improve energy management;
- Using resource and energy saving measures by reducing or eliminating the use of pollutants and ensuring controlled waste disposal;
- We consider opinions and suggestions from all stakeholders and exchange information on possible energy savings;
- Continuous education and training of all employees.
